

Laser Vaporisation Therapy

Lasting relief for benign
prostatic enlargement (BPE)

If you're living with **benign prostate enlargement**, also known as enlarged prostate, you know it can have an impact on your life – day and night.

With Laser vaporisation therapy, it doesn't have to be that way.

Live your life on your terms, away from:¹

- Weak stream
- The urgent need to go
- Uncomfortable, painful, or burning urination (dysuria)
- Nighttime waking to urinate (nocturia)

of patients say they would recommend Laser vaporisation therapy to someone else with BPE²

Explore what's possible with
Laser vaporisation therapy

Why choose Laser vaporisation therapy?

Having an enlarged prostate can make for bothersome urinary symptoms.¹ Laser vaporisation therapy uses a laser to remove overgrown tissue in order to improve urine flow.

Before and after images of inside the prostate of a patient with BPE.

A proven treatment

Laser vaporisation therapy has been proven for more than:

20 YEARS³

1 MILLION PATIENTS^{*3}

Laser vaporisation provides rapid,⁴ lasting relief⁵ – with symptom reduction for up to 15 years.⁶

This procedure can be performed in a hospital or ambulatory surgery center, with same-day or next-day discharge.⁵

The European Urological Association recommends Laser vaporisation therapy for patients who have an enlarged prostate (including small, medium, and large prostates), have trouble with urinary retention, and/or are taking blood thinners.⁷

This Laser vaporisation procedure is fantastic. It's something I would highly recommend to anybody who needs this kind of therapy.

– Jon, Laser therapy patient
Individual results vary.

One procedure, lasting results

Intended benefits for people suffering from BPE...

- ▶ Lasting symptom relief for up to 15 years⁶
- ▶ Return to stable health and hospital discharge in 26 hours on average^{**8}
- ▶ Stopping or reducing BPE meds⁵
- ▶ Low risk of serious adverse events⁵
- ▶ Minimum impact on erectile function^{9,10}
- ▶ Ability to treat people with urinary retention and/or higher risk of bleeding¹¹

Compared with TURP, a traditional surgical option for BPE, Laser vaporisation therapy is clinically shown to provide²:

- ▶ 50% less time, on average, with a catheter (22 hours vs. 46.7 hours)⁸
- ▶ 2x as fast return to stable health (26 hours vs. 52.8 hours)⁸
- ▶ Lower incidence of complications, such as bleeding¹²
